

Support embedded Files in PDF Export Options

PDF-Options will allow to embed the opened ODF file to the exported PDF document. Export filter will provide this with command `IsAddStream`.

For many electronic invoices it is needed to create a PDF, which has embedded a XML file. At this moment all solutions for this will only work with external tools like PDFtk.

Function for embedding a file is there. Only the possibility to add an external file is missing in GUI and in parameters for PDF export filter.
